You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance	
from the basket and the player's position. The ball is shot N times, successfully. You are given an array A containing the distance of a player from basket for N shots. The index of array represents the position of the player. Score is calculated by	/
multiplying the position with the distance from the basket. Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a	N.
Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a contiguous subarray of size K from the given array.	SABRIC
ုဇ် Note:)
* A subarray is a contiguous part of array.	, Eco
* Assume 1 based indexing.	BRIS
* The array contains both negative and positive values.	,
* Assume the player is standing on a cartesian plane.	sECO5A3
Input Format	560
- input1:An integer value N representing the number of shots made by the player - input2: An integer K representing the size of subarray	o.
- input2 : An integer K representing the size of subarray	5ª 3BR22
- i nput3 : An array of integers	20.
